ABSTRACT:

PURPOSE: To obtain the subject composition excellent in processability, moldability, and material properties such as heat and impact resistances.

CONSTITUTION: This resin composition comprises 40-90 pts.wt. aromatic polycarbonate resin (PC resin), 5-40 pts.wt. graft copolymer resin (ABS resin), and 1-30 pts.wt. aromatic diphosphate represented by the formula. It may optionally contain 0.1-1.0 pt.wt. PTFE. In the formula, R1, R2, R3, and R4 each independently is a 1-3C alkyl and Y is phenylene or biphenylene.

ABSTRACTED-PUB-NO: JP07011119A

BASIC-ABSTRACT:

Compsn. contains (1) 40-90 wt. % of aromatic polycarbonate (PC) resin (A), 5-40 wt. % of a graft copolymer resin (B) composed of a conjugate diene rubber polymer (a) of 0.15-0.35 microns in wt. average grain size, an aromatic vinyl monomer (b), a vinyl cyanide monomer (c) and opt. a vinyl monomer (d) copolymerisable with the polymer (a) and the monomers (b) and (c) and 1-30 wt. % of an aromatic diphosphate (C) of formula (I).

In (I) R1, R2, R3, R4 = 1-3C alkyl gp; Y = phenylene gp. or biphenylene gp.

Fire resistant thermoplastic resin compsn. (2) contains 40-90 wt. % of the PC resin (A), 5-40 wt. % of the graft copolymer resin, (B) 1-30 wt. % of the diphosphate (C) and 0.1-10 wt. % of polytetrafluoroe thylene (D).

USE/ADVANTAGE - In mouldings such as car parts, electrical parts or machine parts. The compsns. can compose mouldings high in shock resistance, heat resistance and mouldability.

CHOSEN-DRAWING: Dwg.0/0

ABSTRACTED-PUB-NO: EP 869147A
BASIC-ABSTRACT:

ABS-type thermoplastic moulding materials (I), containing: (A) 5-95 wt.% thermoplastic homo-, co- or ter-polymer(s) of styrene (S), alpha -methylstyrene (AMS), acrylonitrile (AN) and/or N-substituted maleimide;

(B) 5-95 wt.% graft copolymer(s) of (B1) 5-90 pts. wt. monomer(s) as in (A) on (B2) 95-10 pts. wt. rubber with a Tg of at most 0 deg. C; and

(C) 1-10 pts. wt. (per 100 pts. wt. A + B) lubricants, antistatics and/or mould release additives.

Component (A) is obtained by bulk, solution or suspension polymerisation and has an oligomer content of at most 1 wt.%, component (B) is obtained

by emulsion polymerisation, with the total oligomer content of (I) being at most 0.8 wt.%, and the ratio (R) of mol. wt. of additive : wt.% of additive in (I) at least 150.

USE - For the production of injection mouldings, especially high gloss mouldings (claimed).

ADVANTAGE - Provides ABS materials with good processing properties, which can be used to make high-gloss products by injection moulding, without the formation of coatings due to liquid migration or low-viscosity components during moulding and processing.
